# ABOUT US

Merlin Engineering Enterprises is a manufacturing and engineering firm based in Chennai, Tamil Nadu, specializing in industrial access solutions and security products for commercial and industrial applications. Established around 2011, the company focuses on designing, manufacturing, installing, and servicing a variety of customized engineered systems that meet high safety and durability standards for its clients.

The firm's core offerings include rolling shutters (with power drives), sliding and swing gates, boom barriers, steel doors, aluminium windows, and other related access control products. Their products are tailored to enhance operational efficiency and security and the company emphasizes customer-centric service, reliability, and energy-efficient designs. With a dedicated team committed to quality and programmed maintenance support, Merlin Engineering Enterprises strives to deliver solutions that reduce long-term operational costs and extend product life cycles.

**MISSION**

## Our Mission

To deliver high-quality engineering solutions through precision manufacturing, timely execution, and reliable service.

## Our Vision

To be a trusted leader in engineering solutions, delivering innovative, high-quality, and reliable products.

# STEEL SLIDING GATE

Steel Sliding Gate provide a strong and secure solution for controlling entry and exit in industrial, commercial, and residential spaces. Designed to move smoothly along a track, they are ideal for wide openings where swing gates are not practical, offering both safety and convenience.

# ROLLING SHUTTER

Rolling shutters provide a reliable and efficient solution for securing shops, warehouses, factories, and commercial spaces. Designed for smooth vertical movement, they offer strong protection against unauthorized access while maintaining ease of operation and a neat appearance.

# STEEL SWING GATE

Steel Swing gate are known for their strength, durability, and high level of security, making them an ideal choice for residential, Commercial, and industrial buildings.

# COMPOUND WALL GRILL

Compound Wall Grills are designed to provide strong perimeter security while enhancing the visual appeal of residential, commercial, and industrial properties.

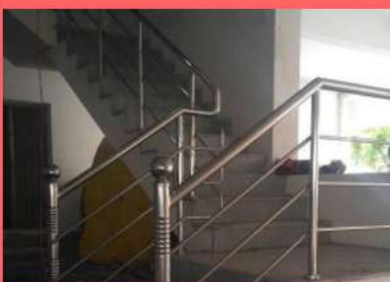

# MS GRILL FOR WINDOWS

MS Grill for Windows provides reliable security while maintaining proper airflow and visibility for residential and commercial spaces. Manufactured from high-quality mild steel, these grills are strong, durable, and designed to withstand daily wear and external conditions.

# STAIRCASE HANDRAIL WORK

Staircase handrail work provides safety, support, and aesthetic appeal to staircases in homes, offices, and commercial buildings. Properly designed handrails prevent accidents while enhancing the overall look of the staircase.

# BALCONY GLASS WORK

Balcony glass work enhances the look, safety, and functionality of balconies in homes, apartments, and commercial buildings. It provides a modern and elegant appearance while allowing natural light and clear views.

# ELECTROMECHANICAL TRAFFIC BARRIERS

Electromechanical traffic barriers are automated systems designed to control and manage vehicle access in residential complexes, commercial areas, parking lots, and industrial sites.

# ALUMINIUM WINDOW

Aluminium windows are strong, lightweight, and long-lasting, making them suitable for residential and commercial buildings. They are resistant to rust, corrosion, and weather changes, which helps maintain their appearance and performance for many years with very low maintenance.

# UPVC WINDOW

uPVC Windows offer excellent insulation, durability, and modern aesthetics for residential and commercial spaces. Designed to withstand harsh weather conditions, they provide superior thermal and sound insulation while maintaining a clean, stylish appearance.

# PEB MS STRUCTURALS - UPTO 20 TON

Pre-Engineered Building (PEB) structures offer a modern, cost-effective solution for industrial, commercial, and warehouse construction. Designed with precision and manufactured using high-quality steel, our PEB structures ensure fast installation, superior strength, and long-lasting performance. We undertake PEB projects up to 20-ton capacity, delivering reliable and efficient structural solutions.

Ideal for factories, storage units, and medium to large-span buildings, these structures are Customizable to meet specific space and operational requirements. Their lightweight yet durable design helps reduce Construction time and overall costs while maintaining strong structural integrity.

## FEATURES

- High Strength Steel Structure
- Fast & Easy Installation
- Cost-Effective Construction
- Weather-Resistant Design
